GEORGIA, USA

2025

The proposed concept for a new horticulture building at a Technical College focuses on plant cultivation and hands-on learning.

The project was developed collaboratively with a multidisciplinary team. My contributions included architectural programming, site analysis, and exterior design.

Horticulture Building

Cultural Winery

TOSCANY, ITALY
2024

The building's form follows natural vectors found in the landscape, while terraced levels respond to and respect the site's unique topography. Material finishes and the color palette draw inspiration from the existing winery buildings, creating a cohesive architectural language.

Developed as a competition entry, the project includes architectural programming, site analysis, massing studies, exterior and interior design, renderings, and the final presentation boards with supporting narratives.

This renovation project for an Aviation School supports future enrollment growth and enhances student engagement through upgraded campus facilities, renovated interiors, and an improved exterior identity.

Developed collaboratively, my role included exterior and interior design, graphics and presentations, construction documentation and construction administration.

Campus Renovation

GEORGIA, USA
2023-2024

BERLIN, GERMANY

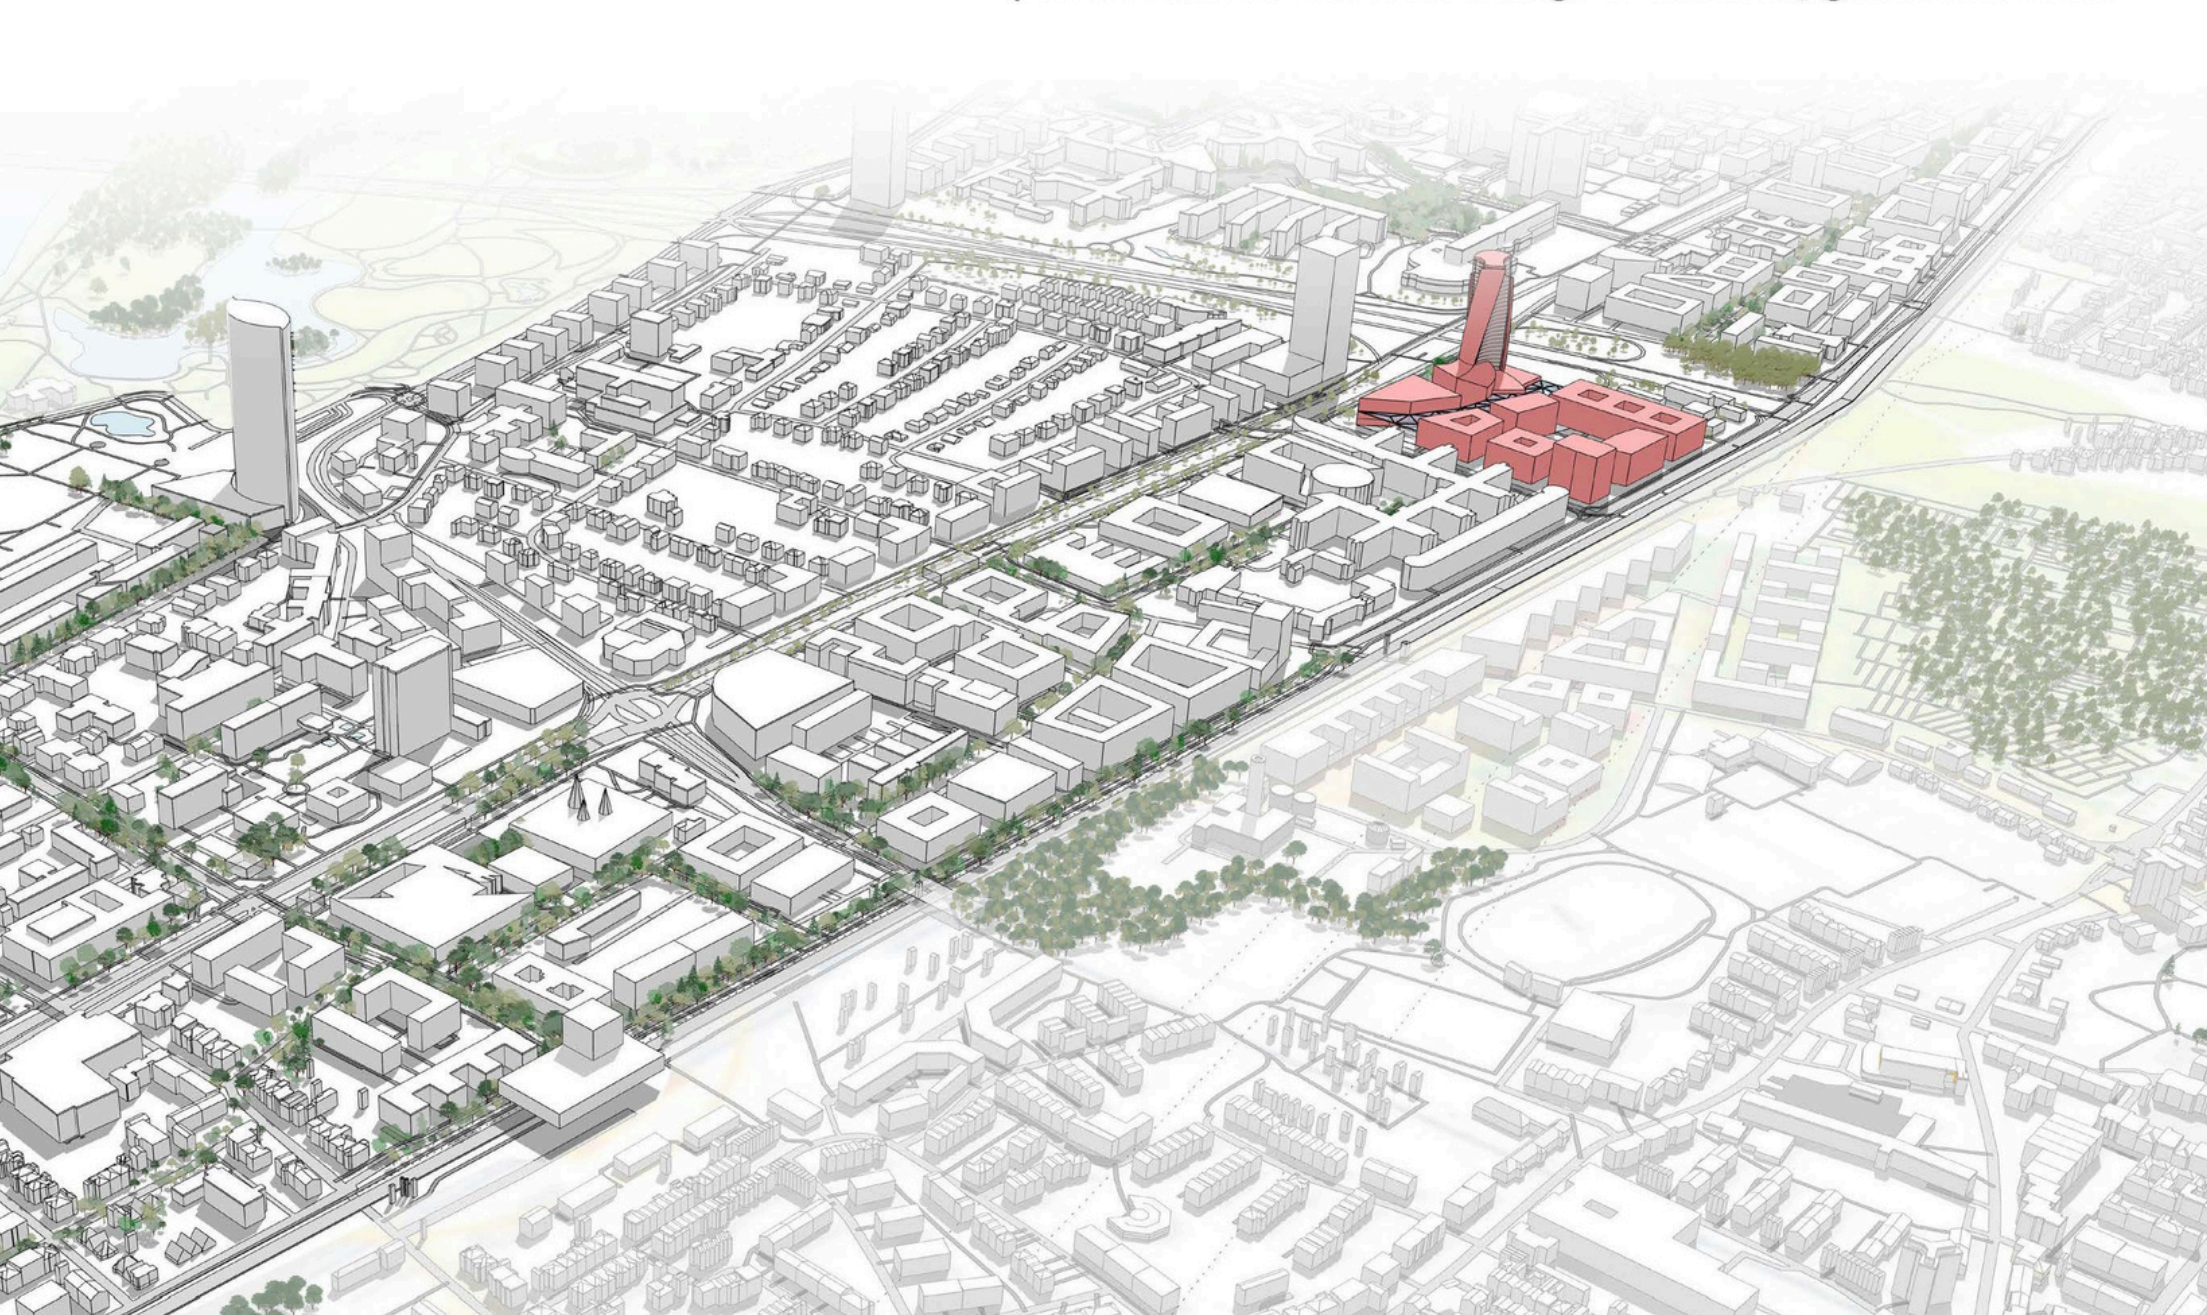

2022

The project proposes a mixed-use residential complex combining affordable living and hotel functions. Developed in response to a site in Berlin, the concept explores urban density, program integration, and site potential. This proposal was completed as an individual design effort.

Residential Complex

Pot of Nations

BONN, GERMANY

2021

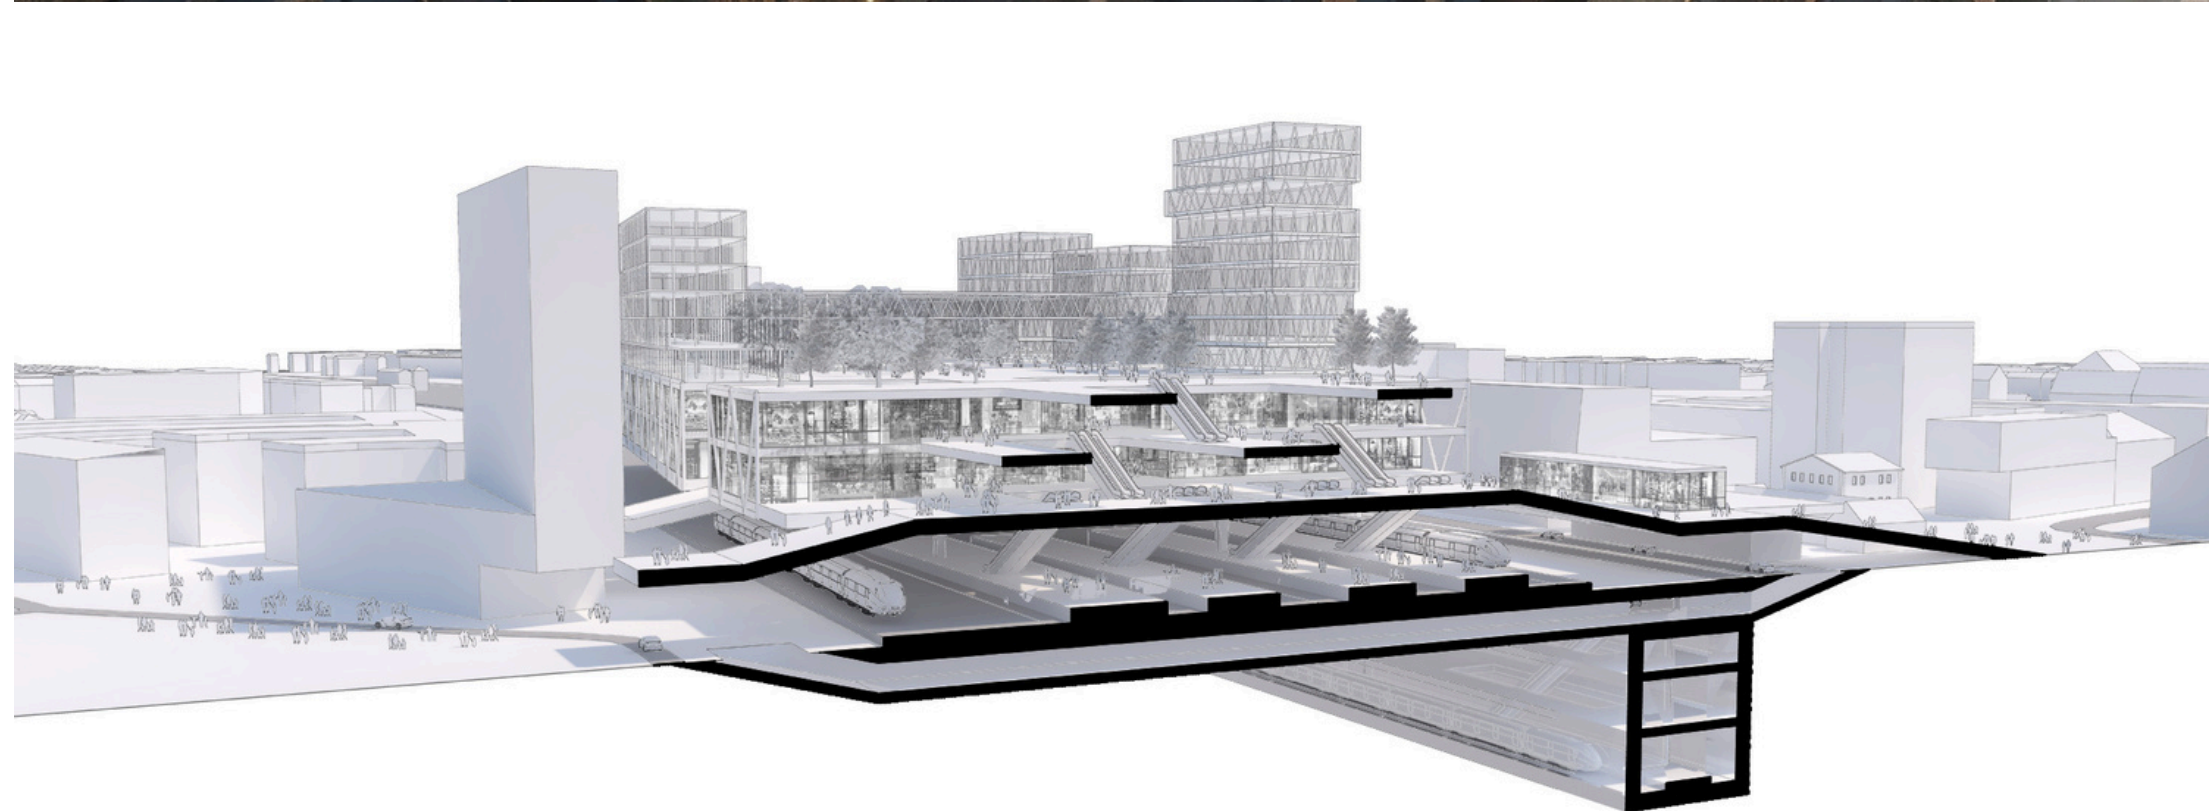

This mixed-use concept project was designed to address the needs of an active growing business district. Developed within the framework of a master plan prepared by the City of Bonn, the project was created in collaboration with a multidisciplinary design team.

MUNICH, GERMANY

2018-2020

A mixed-use urban development reconnecting neighborhoods divided by a railway and forming a new gateway to Munich.

The program includes a transportation hub, retail and dining, offices, hotels, and multifamily residential. Collaborative project.

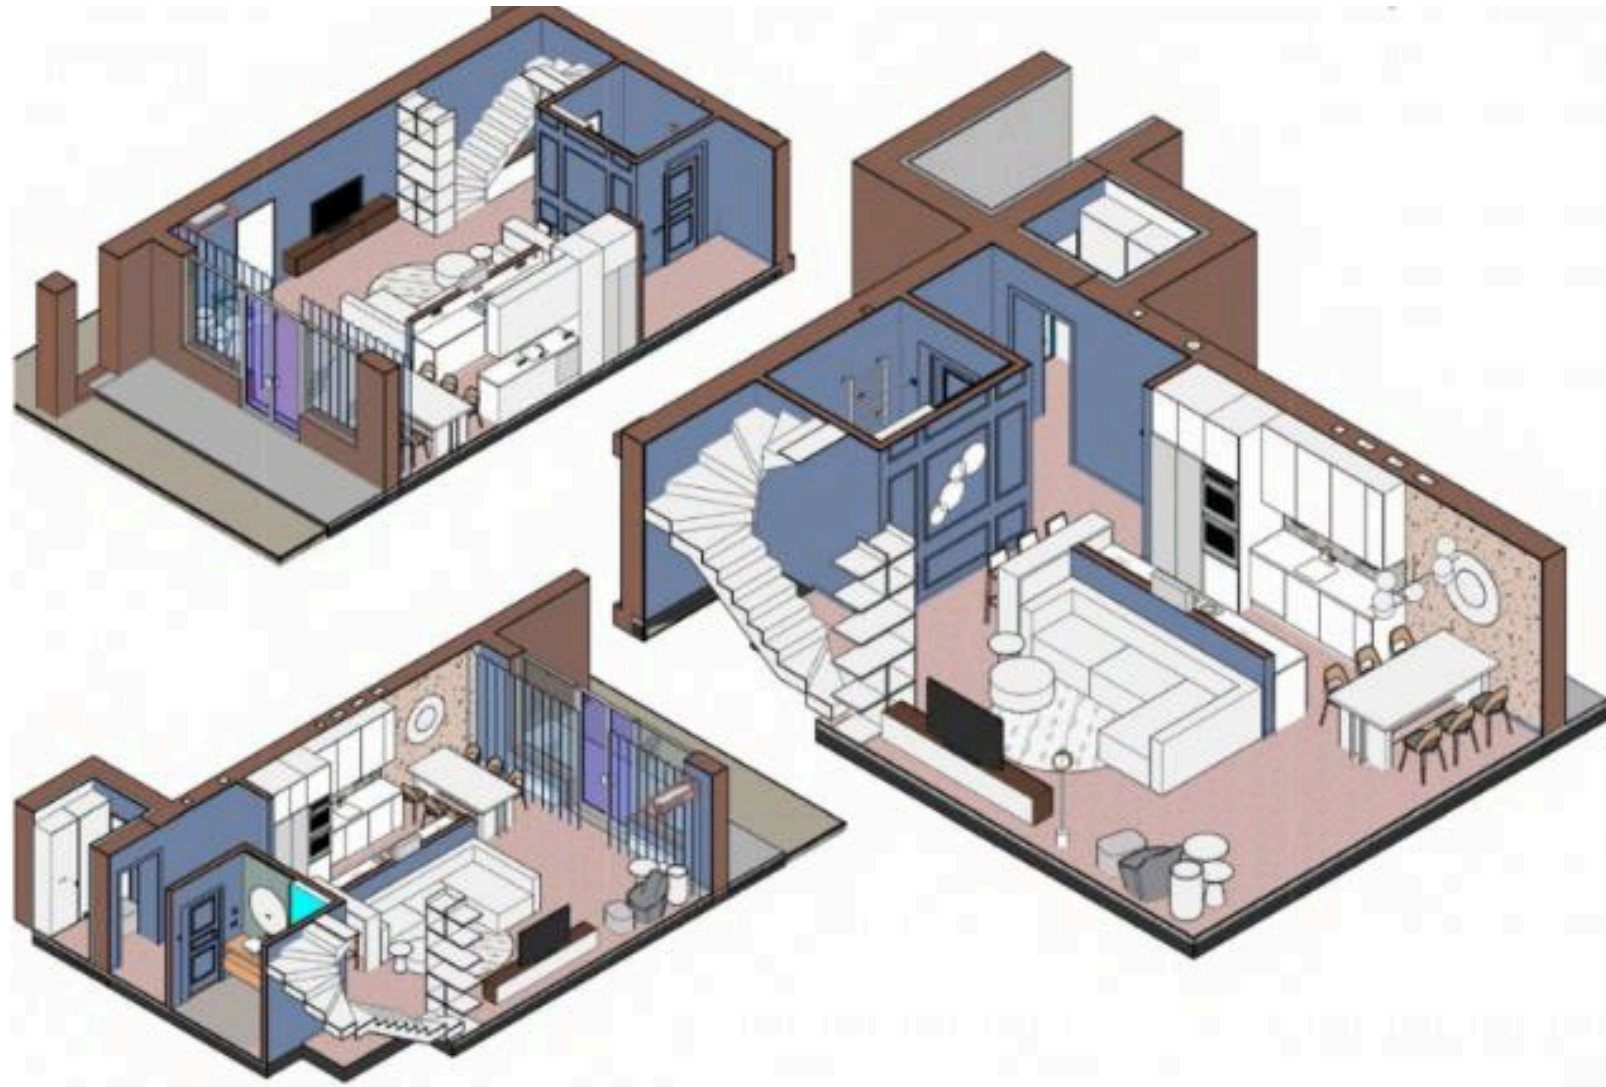

Metropolitan

KYIV, UKRAINE

2018

Designed for a townhome in Kyiv, this interior project explores vertical spatial development as a response to limited area. Thoughtful zoning enables flexible combinations of functions while maintaining spatial clarity. The project was completed as an individual design effort.

Townhome

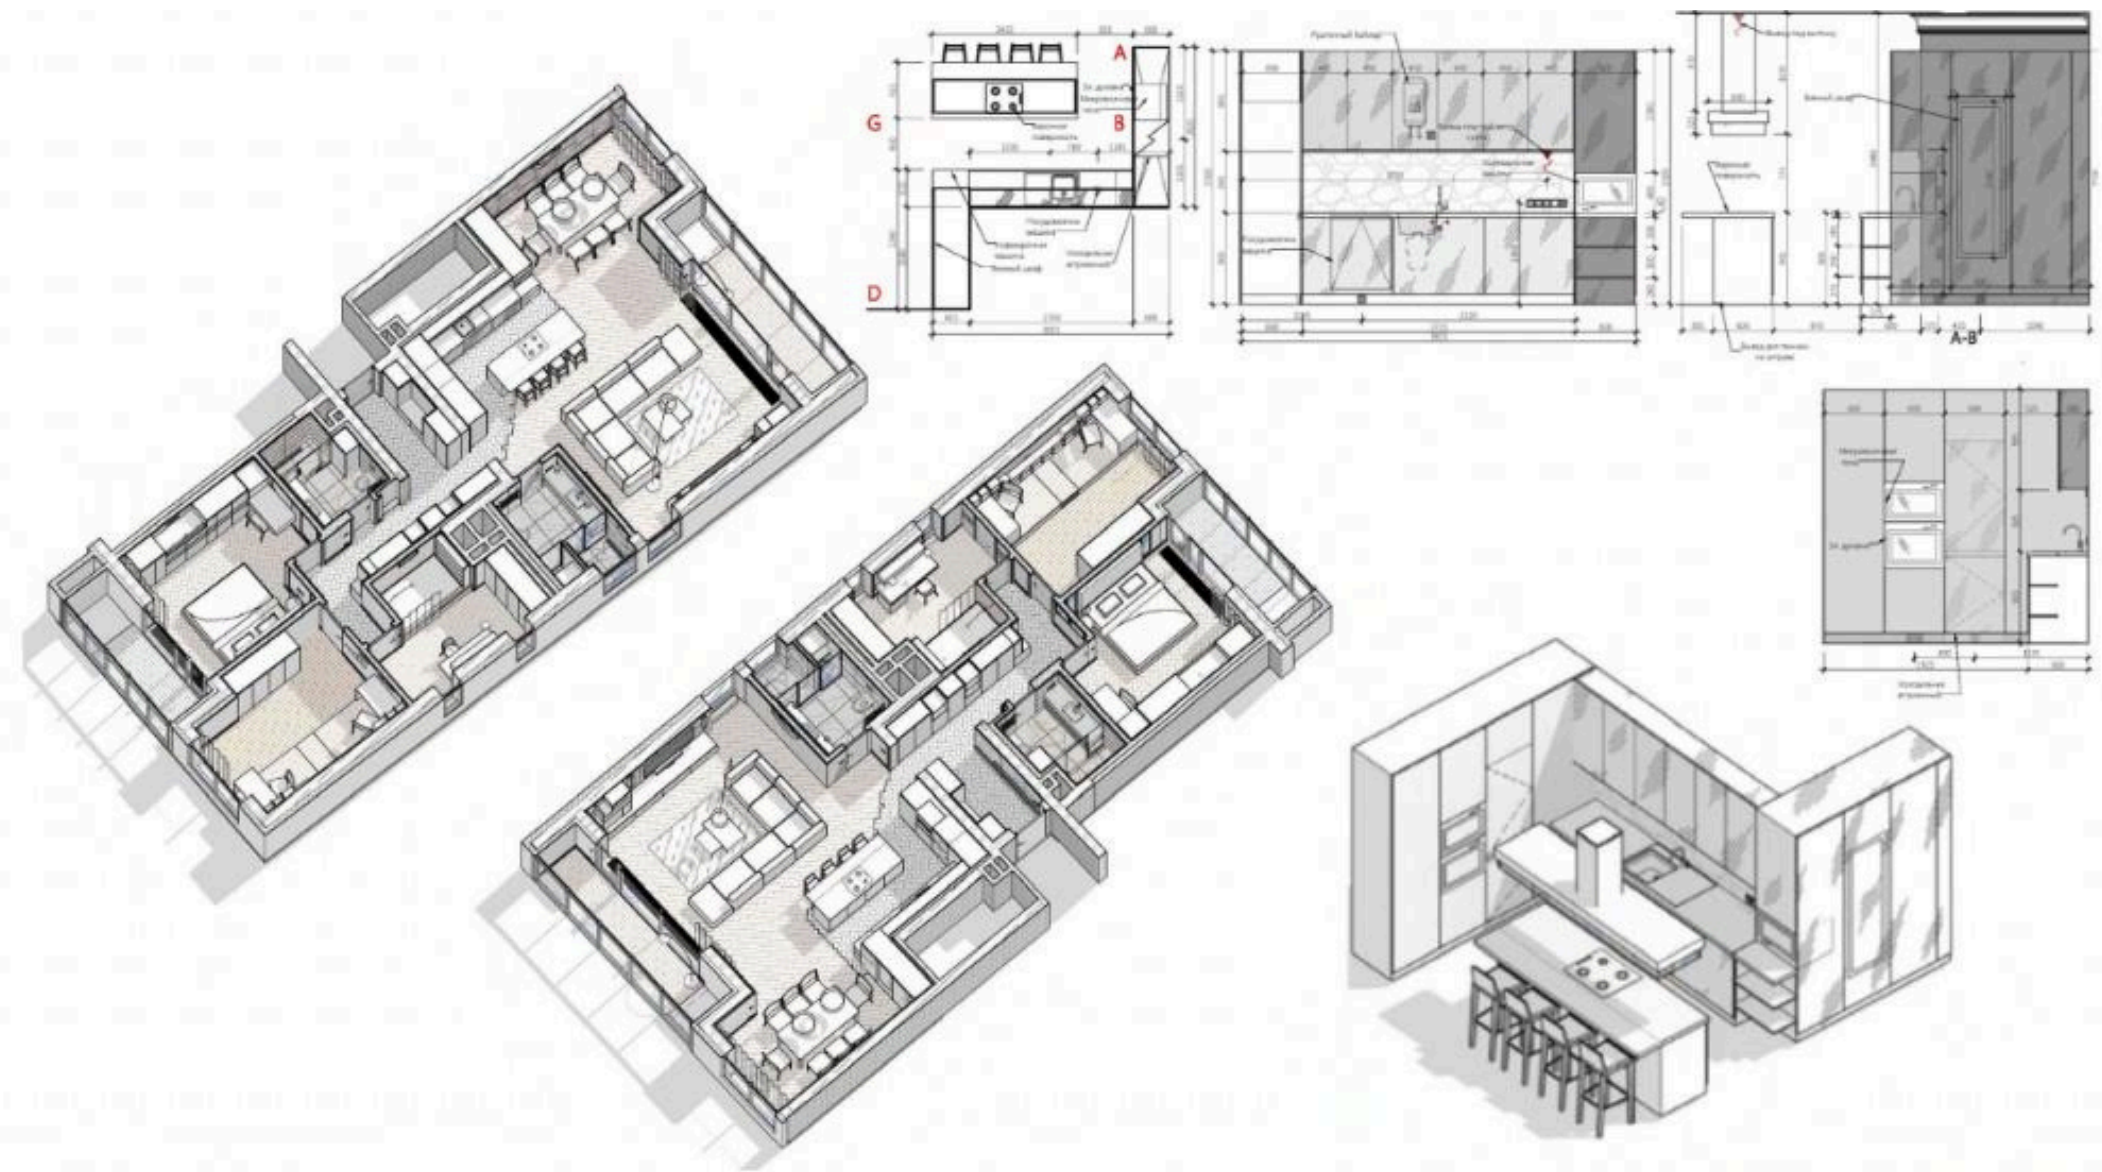

MOSCOW, RUSSIA

2017

Egodom

This project transforms two separate apartments into one unified living space within a newly constructed multifamily high-rise.

Developed to meet the specific needs of a private client, the project progressed through all phases of documentation, permitting, and construction administration, delivering a carefully considered interior environment.
